Download, Description, Version, Update Time, File Size. How can I fix it so my drivers install correctly? A: After carefully taking a look at the log file I can tell you that it is complaining because the driver version you are installing (1030.25.0101.2010) is not compatible with Windows 7 SP1. Because Windows 7 has had numerous security updates since the release of this driver, the installer is not compatible with 7. It is possible that the installer has not been updated since Windows 7 SP1 was released, but in this case it would be a good idea to either update the installer or update the driver to the latest version which is 1030.25.1002.2010 You can install the driver with the updated installer using the same key but I suggest getting the newest version which is 1030.25.1002.2010 6.8k SHARES Facebook Twitter Whatsapp Pinterest Reddit Print Mail Flipboard Advertisements While Jill Biden, Vice President Joe Biden's wife, is
